Continental TerminalMaster
The Heavy-Duty Tire for Terminal Tractors & Trailers

› The TerminalMaster is developed for heavy duty applications especially in port terminal operations
› S-shaped cross ribs allow excellent traction in all conditions and in all weather conditions
› The closed-shoulder design ensures high resistance to tire scrubs during tight maneuvers

Characteristics

Port Terminal operations are very demanding for tires. Terminal tractors with their short wheelbase are designed for tight turns with a lot of tire abrasion. In addition ground conditions are synonymous with a high amount of debris & uneven surfaces with kerbs and rails. Conditions are especially harsh with a high risk of tire damage. It is therefore recommended to use a tire specially developed for this application. The Continental TerminalMaster is designed for this type of heavy-duty application combining a high load carrying capacity, extra deep tread and added damage protection from foreign objects.

- Distinctive S-shaped cross ribs
- Deep tread depth and reinforced sidewall
- Closed-shoulder design

Distinctive S-shaped cross ribs
The distinctive S-shaped cross ribs create numerous grip edges for outstanding traction.

Deep tread depth and reinforced sidewall
Deep tread depth gives increased mileage and added puncture resistance. Reinforced sidewalls give additional protection from foreign objects.

Closed-shoulder design
Wide shoulder ribs give resistance to tire abrasion during maneuvers and prevent uneven wear.

Now 30mm Tread depth for more mileage
