

When Everything Counts

ContiSportContact® 5

A new generation in safety and performance for modern day cars and SUV's.

- > Developed with compounds that result in the reduction of rolling resistance providing reduced fuel consumption and CO² emissions.
- > Designed to offer extremely short braking distances on wet and dry surfaces for maximum safety.
- > Offers high levels of grip resulting in driving confidence and enjoyment.

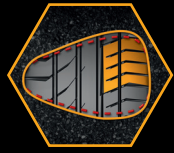

* Also available in Self-Supporting Runflat (SSR) Technology. SUV product range available.

ContiSportContact® 5

Unlimited driving fun thanks to excellent grip.

Technical highlights.

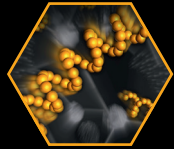

Excellent road grip and handling

The macro-block design of the tyre's outside shoulder provides a larger contact area, which can therefore adapt optimally to the road surface. The ContiSportContact® 5 offers improved road grip and thus more safety when cornering.

Shorter braking distances in all weather conditions

When braking, the tyre has a high natural frequency within the compound. Short-chain polymers in the Black Chili compound of the ContiSportContact® 5 react to this braking frequency and thus provide optimal energy absorption. The resulting heat shortens the braking distance on wet and dry roads.

Reduced fuel consumption and high mileage

At a constant speed, the vibrations in the compound are significantly lower. The long-chain polymers within the compound can release the absorbed energy better, resulting in considerably reduced rolling resistance. Thus, the tyre runs more easily and remains cool - for a higher mileage and a reduced fuel consumption.

Long-chain polymers

Tyre performance.
