

When Everything Counts

ContiSportContact® 5 P

Safe performance for high performance cars while offering maximum driver enjoyment and confidence.

- Perfect steering precision and confident handling.
- Outstanding grip and stability during cornering.
- Exceptional braking ability on both wet and dry roads.
- Winner of Australia's Motor Magazine Tyre Test 2017.

* SUV product range available.

ContiSportContact® 5 P

Sportiness that can be seen.

Technical highlights.

Perfect steering precision and sporty handling

The solid, sturdy central ribs, attached tread lugs, plus asymmetrical tread ribs ensure optimum, longitudinal stiffness in the tyre and reduced movement in the tread. This means steering forces are transmitted straight to the road.

Outstanding grip and stability during cornering

A supple macro-block design on the outer shoulder and solid central ribs, ensure that the tyre adapts perfectly to the road surface. Particularly during fast cornering the contact patch is increased. The driver receives excellent feedback when approaching the limit and the tyre provides outstanding grip with maximum stability.

Rolling resistance-optimised 'cap and base' tread

The two tread components - 'cap' and 'base' - complement the balanced compound concept and ensure good grip in the wet, whilst at the same time providing short braking distances and reduced rolling resistance.

The 'cap', on the outside, provides good grip in the wet and short braking distances, whilst the 'base', on the inside, reduces rolling resistance. Together they achieve more positive road grip and retain kinetic energy, whilst simultaneously ensuring high safety.

Short braking distances on both wet and dry roads

Black Chili Technology is a specially developed compound technology involving an innovative type of racing grade carbon black, which ensures a speedy warm-up process and greater stability. The polymers in the compound are reinforced with nano particles, making them extremely supple. Thus they provide more contact points with the road, so grip is substantially enhanced and the tyre far more stable. In addition, special grip resins provide optimum interlocking with both wet and dry roads, thus achieving shorter braking distances.
