

When Everything Counts

## ContiVanContact® 100

High levels of safety and efficiency for transporters and vans.

- > High levels of efficiency thanks to mileage improvements through new long lasting silica compounds.
- > Improved durability on all roads and thus longer service life thanks to new pattern design technology.
- > High safety reserves for heavy loads gained through robust construction and reinforced sidewalls.

# ContiVanContact® 100

Cost effective. Reliable. Durable.

## Technical highlights.

### Cost effective

The flat contour and long-life silica compound provide an increased footprint, which provides more wear volume and therefore improved mileage performance and reduced running costs for the vehicle.

### Reliability

The development of a robust carcass construction and reinforced sidewall means a greater load capacity and improved stability. These technologies ensure a highly reliable tyre over long distances and under heavy loads.

### Durability

A stone ejector is featured at the bottom of the tread pattern that prevents stones becoming stuck in the grooves of the tyre. This technology further protects the tyre from chipping and other potential road damage, providing excellent durability on all road surfaces.

A 3D scuff rib provides sidewall protection from abrasions for improved durability and a longer service life.

## Tyre performance.
