The New Conti Urban HA 5

Pure ease of mind.

The tyre that ticks all the boxes and gives you ease of mind - The growth of urban transport comes with growing challenges: Varying road conditions from urban to rural regions, increasing pressure from tighter schedules, the wear and tear of heavy stop-and-go traffic, a higher share of electric buses, new CO2 regulations and more.

Choosing the best tyres is crucial to meeting these demands, while still ensuring your passengers have a safe and comfortable ride. The fifth generation of our Conti Urban line makes the decision easy and gives you peace of mind. The tyre ticks all the boxes needed to make businesses more efficient without any compromises:

The new Conti Urban HA 5 combines high mileage with improved rolling resistance, helping fleet managers to save costs and reduce their carbon footprint. In addition, ContiConnect enables digital tyre monitoring, which increases efficiency by accurately measuring tyre pressure and temperature as well as providing mileage predictions.

An ingenious tread pattern design stiffens the Conti Urban HA 5 in wet conditions, providing remarkable safety for a lifetime. Our innovative multi-pitch technology makes the ride smoother than ever and positions the Conti Urban HA 5 for an A-rating in noise reduction. With an extra thick sidewall and robust compounds, the Conti Urban HA 5 is ready for curbs and other obstacles. It is also made for all types of buses – including electric ones. Add to this innovative remoulding and recycling concepts and you will see that the Conti Urban HA 5 goes the proverbial extra mile in all dimensions.

The Conti Urban HA 5 gives peace of mind to all those who take responsibility for efficiency and safety. It is the tyre fleet managers can count on.

Integrating RFID into tires significantly facilitates the sharing of tire-related information. The technology uses electromagnetic fields without the need for a battery to automatically identify and track chipsets embedded in our tires. RFID improves efficiency and the user experience in a variety of ways, keeping you one step ahead in an increasingly connected world.

German engineered
high mileage tyres for Urban
applications.

- Experience high mileage thanks to an improved tread cap and base compound formula designed for urban use.
- Benefit from cost savings and a significant reduction in CO₂ emissions thanks to our improved tread cap and tyre monitoring system, which increase the tyre's durability and fuel efficiency.
- Enjoy a safer and more comfortable ride thanks to the extra robust tread pattern with remarkable wet performance and A-rated noise reduction.
