

Increased Mileage

Longer Tread Life

Longer Casing Life

Reduced Roadside Breakdowns

ContiPressureCheck®

On-Vehicle Tire Pressure Monitoring System

- » Informs the driver in real-time via a convenient in-cab display
- » Supports multiple trailer configurations - married and drop-and-hook
- » Ideal for long-haul and over-the-road vehicles that don't return to the yard frequently

**Properly inflated tires
can reduce total tire-related
costs by \$600 to \$800
annually per vehicle.**

Actual results may vary. According to the Technology & Maintenance Council (TMC) S.2 Tire & Wheel Study Group, improper tire inflation, defined as little as 10 psi low, reduces fuel economy by about one percent, increases total tire-related costs by approximately \$600 to \$800 annually per tractor-trailer combination, and changes the tire contact patch which affects stopping and acceleration traction and vehicle handling thereby impacting vehicle safety.

ContiPressureCheck®

Benefits

Improve Tire Runout

Minimize Irregular Wear

Save Fuel

Save Labor & Maintenance Costs

Reduce Roadside Breakdowns

Improve Safety

System

1 Display

2 Tire Sensor (One per running wheel)

3 Central Control Unit (CCU)

4 Additional Antenna

Specs

Short Description	On-Vehicle TPMS
Monitors	Tire temperature and pressure of a single vehicle or tractor/trailer - up to 8 axles / 32 tires
Data Access	Real-time data to the driver via an in-cab display
Alerts	Real-time audio and visual alerts to the driver
Hardware	Tire sensors, CCU, wire harnesses, in-cab display, Hand Held Tool

Powered by Continental's Intelligent Tire

- Accurate, real-time tire pressure and temperature to prevent tire damage and breakdowns
- Sensor warranted for 5 years* to minimize disruptions to your tire program
- Sensor provides true casing temperature, allowing preventive actions that make your tire last longer
- Avoids valve damage and air leaks by mounting on the inner liner of the tire
